

WAA Final Project Business Logic

Student David Costa
Professor Orlando Arrocha

Use the services provided to:

Create, List, Delete, Update products
Create, List, Update persons
Create and List orders

Your web application has to:

- A) Provide a **REST API** to perform the operations above listed - OK
- B) A Java client application or web application to **demonstrate/test** how to consume your REST services
- C) Provide a web application with:

- 1 - A **public area**, where visitors can see the list of products

- 2 - **Users can login to:**

- Place orders

- Update their personal information (Users will be related to persons by email)

- 3 - **Administrators can login to:**

- Maintain the list of products

- Create and List persons

- List Orders

Extra

Add a page to allow visitors (in public) to register and become users that could login to place orders.

You will need to add database tables and corresponding maintenance code to support this functionality, besides adjusting the authentication provider.
